

IFM Network Performance Metrics

May 21, 2003

IFM Network Performance

■ Significant events

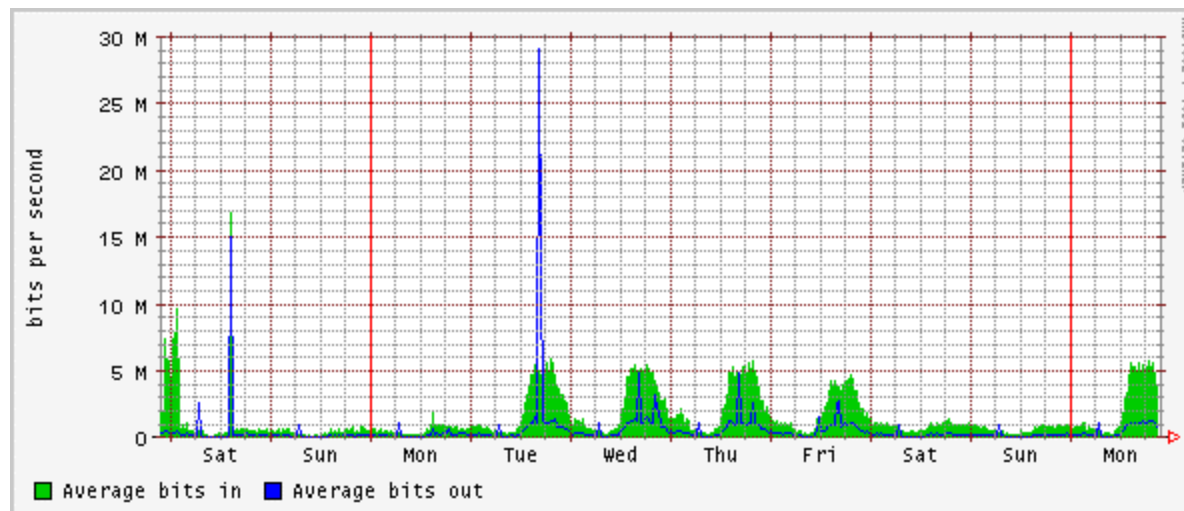

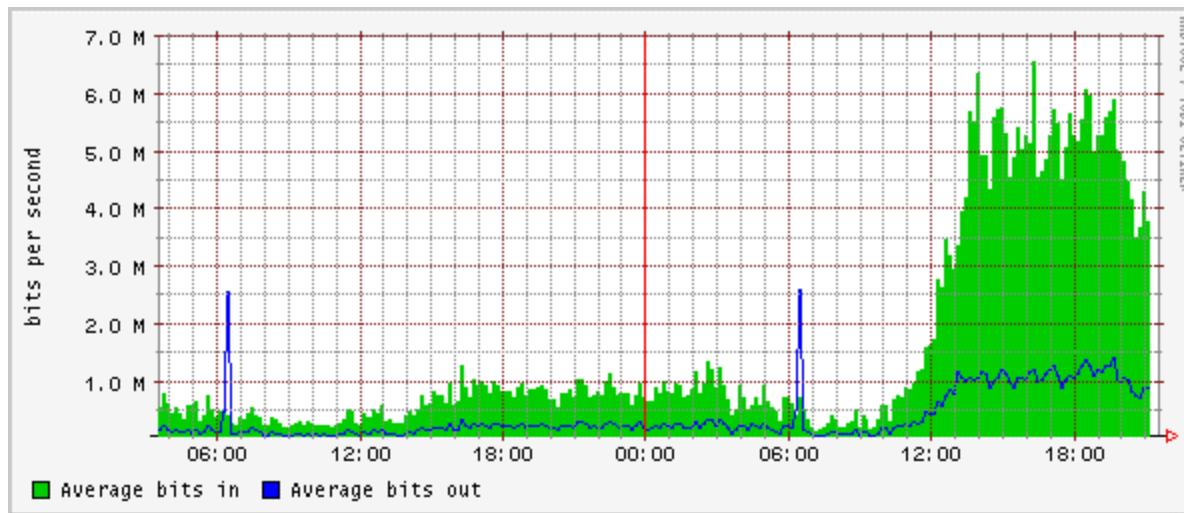

- The vertical scale is averaged, so when the horizontal scale is in short time durations, then the vertical scale may be in greater size graduations.
- The spike on the hourly is due to the installation on SEMAPPS05
- No other significant events have occurred.

IFM Network Stats

(Hourly and Daily)

Notes: Average bits in (Green) refers to bits out of IFM Network.
Average bits out (blue) refers to traffic coming into the IFM network.
(Stats are taken from WAN Router)

IFM Network Stats

(Weekly and Monthly)

Notes: Average bits in (Green) refers to bits out of IFM Network.
Average bits out (blue) refers to traffic coming into the IFM network.
(Stats are taken from WAN Router)
